PII100SN Solid Bar and Wire

*If you don't like it, simply
pour it out and we will give
you the price per pound for
every pound you return.
-Easy -No Risk*

PII100SN can be used as **a drop-in replacement for any existing 99C or *SN100C solder bath,** without the need for pot dumps or swaps. Once PII100SN is in use, Powell Industries offers free, limited solder analysis to help maintain J-STD specifications and an optimal soldering process.

Compete at a higher level with PII100SN. Available in solder bar and wire, PII100SN has an identical chemical composition and is

a seamless drop-in replacement for the well-known *SN100C® solder.

Produced with the highest quality raw materials and delivering the industry's best price-performance ratio, PII100SN lowers cost of ownership, raises competitiveness and produces high-integrity interconnects.

*This solder alloy was previously subject to a patent (US6180055) that expired in March 2019. Nihon Superior Sha Co., Ltd. holds a separate patent for a solder joint (US8999519B2) with a distinct chemical composition, consisting of, among other things, either exactly .01% by weight Cu or 7.6% by weight Cu. PII100SN has a certified copper content of .5-.7% which lies significantly outside the solder joint patent criteria. If there are concerns about the full scope of the US8999519B2 patent or solder joint composition, please consult an attorney. Powell Industries Inc. does not possess or confer to customers any intellectual property rights relating to the composition of their solder joints or the name SN100C®, which is a registered trademark of Nihon Superior Sha Co., Ltd.
